

Utility	Description	Common Uses	Example Usage
ls	Lists directory contents	View files, permissions, metadata	<code>ls -l</code>
mkdir	Creates a new directory	Organizing files	<code>mkdir myfolder</code>
rmdir	Removes an empty directory	Cleaning unused folders	<code>rmdir emptydir</code>
stat	Shows detailed file status	Viewing timestamps, permissions	<code>stat file.txt</code>
cat	Displays/concatenates files	View file content, combine files	<code>cat file.txt</code>
rm	Deletes files/directories	Remove unwanted files	<code>rm file.txt</code>
mv	Moves/renames files	Reorganize files, rename	<code>mv old.txt new.txt</code>
cp	Copies files/directories	Backup, duplicate files	<code>cp file1 file2</code>
Backup utilities	<code>tar</code> , <code>dd</code> , <code>rsync</code> for archiving	Archives, backups, sync	<code>tar -cvf backup.tar dir/</code>
tail	Shows end of file	Monitor logs (-f)	<code>tail -f /var/log/syslog</code>
head	Shows start of file	Preview first lines	<code>head file.txt</code>
sort	Sorts text lines	Alphabetical or numeric sort	<code>sort names.txt</code>
nl	Adds line numbers	Numbered file display	<code>nl file.txt</code>
uniq	Removes duplicate lines	Filter unique entries	<code>uniq sorted.txt</code>
grep / egrep / fgrep	Search patterns in text	Find matching lines	<code>grep "word" file.txt</code>
cut	Extracts fields/columns	Work with delimited data	<code>cut -d: -f1 /etc/passwd</code>
paste	Combine lines side by side	Merge column data	<code>paste f1.txt f2.txt</code>
join	Join two files on a field	Database-style merge	<code>join file1 file2</code>
tee	Split output to file + screen	Save command output	<code>'ls</code>
pg	Page-by-page viewer	Read large files	<code>pg bigfile.txt</code>
comm	Compare sorted files	Find common/unique lines	<code>comm file1 file2</code>
cmp	Byte-by-byte comparison	Check binary equality	<code>cmp a.bin b.bin</code>
diff	Line-by-line difference	Compare code versions	<code>diff old.c new.c</code>
tr	Translate/delete characters	Case convert, replace chars	<code>tr a-z A-Z</code>
awk	Pattern scanning language	Text processing, reports	<code>awk '{print \$1}' file.txt</code>
cpio	Copy files to/from archives	Backup, system scripts	<code>cpio -ov < filelist</code>

Unit 2 Gedit

Command / Option	Description	Example Usage
<code>gedit</code>	Launch Gedit editor	<code>gedit</code>
<code>gedit filename</code>	Open an existing file	<code>gedit file.txt</code>
<code>gedit file1 file2</code>	Open multiple files in tabs	<code>gedit file1.txt file2.txt</code>
<code>gedit &</code>	Open Gedit in background (terminal free)	<code>gedit &</code>
<code>sudo gedit filename</code>	Open file with administrative privileges	<code>sudo gedit /etc/fstab</code>
<code>gedit --new-window</code>	Open a new Gedit window	<code>gedit --new-window file.txt</code>
<code>gedit --standalone</code>	Open file without loading previous session	<code>gedit --standalone file.txt</code>
<code>gedit --bold</code>	Open file with bold font (UI customization)	<code>gedit --bold file.txt</code>
<code>gedit --display=:0</code>	Open Gedit on a specific display (X11)	<code>gedit --display=:0 file.txt</code>
<code>gedit --help</code>	Show all command-line options and usage	<code>gedit --help</code>
<code>gedit --version</code>	Display Gedit version installed	<code>gedit --version</code>
